Foreword

This year's smoke alarm campaign has built upon the foundations laid over the last few years and acknowledges the great work being carried out at local and national level in many countries in Europe. We have continued to develop the considerable assets available on our campaign website www.europeansmokealarmday.eu and have added new languages and information.

By working in partnership with colleagues in our target countries, smoke alarm companies, national fire associations and local fire services, we have helped to create greater awareness of the need for smoke alarms in domestic properties in Europe. This will help to drive down a major risk to the safety and wellbeing of citizens in Europe.

This report showcases the effective and innovative contributions that our partners have made as part of this year's campaign. The examples of national and local delivery in the report demonstrate the further potential for partners to collaborate in the future.

I would like to see these partnerships further develop and grow in the years ahead. We will welcome new partners to our Smoke Alarm campaign who will provide us new ways of spreading our life saving campaign, reaching households at risk, helping fire services to continue to raise awareness and to influence national governments to introduce legislation to make smoke alarms mandatory in domestic homes. Please contact us if you would like to get involved.

I look forward to working on our campaign for 2026 with all project partners to achieve even more success. I would encourage more government officials, fire safety organisations, insurance companies, consumer organisations, retailers or other stakeholders to contact us if you are interested in getting involved in supporting our campaign. In this way we will continue to reduce fire deaths and injuries in domestic homes in Europe.

Finian Joyce

Vice Chair of European Fire Safety Alliance

Project Coordinator of EU Smoke Alarm Project

Contact details: fjoyce@eurofsa.org

Introduction

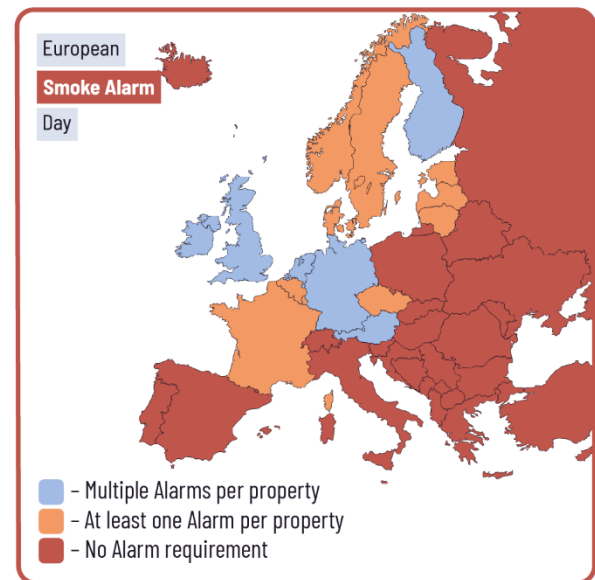

This year's EU Smoke Alarm Day was held on 7th November 2025 as part of the programme of the activities of the 7th European Fire Safety Week 2025. It was the fourth edition of this European wide smoke alarm campaign. It built on the previous editions held since 2022. It was jointly organised by the European Fire Safety Alliance, and supported by the Federation of European Fire Officers (FEU), a number of smoke alarm companies, national fire officer associations and other EU stakeholder organisations.

European Legislation / Regulations

At the start of the 2025 campaign the position in terms of regulations and legislation relating to smoke alarms in domestic properties in European countries is shown below:

Legislation

- Extensive smoke alarm legislation in multiple countries.
- No legislation in Southern/Eastern Europe.
- Weak legislation/lack of enforcement is as bad as no requirement e.g. France 20% homes protected with working smoke alarms according to Fire Service Sources.

It reflects the change in legislation / regulations made in Poland from 1st January 2025. The overall position shows that there are still many countries in Southern and Eastern Europe with no smoke alarm legislation or regulations for domestic properties.

Working Group

A Working Group consisting of European Fire Safety Alliance Core Group members, smoke alarm company representatives, representatives of fire officer associations in Europe and our IT partners Learnkey from Lithuania worked on this year's campaign over a number of months.

The members of the Working Group consisted of the following:

Finian Joyce, EuroFSA (Chair)
Krzysztof Biskup, EuroFSA

Veerle De Decker EuroFSA
Sanne Michelsen, Smartwares
Shane Lyons, EI Electronics
Veronique Vasquez, Fireangel
Pawel Bonislowski, Eura-Tech
Simon Jones, Carrier
Loreta Kelbauskaite Serpyte, Learnkey
Mindaugas Galeckas, Learnkey
Thorsten Teichert Euralarm
Robert Klonowski (Dept of Interior, Poland)
Marcin Rucinski, Poland
Sagrario Moreno (APTB, Spain)
Martin Nekula (CAHD, Czech Republic and CTIF)
Laszlo Barta Vamos, Hungary
Tuuli Taavet, Estonia
Ilze Dame, Latvia
Anthony Pisani, Malta
Aurimas Gudziauskas (Lithuania)
Michela Vuerich, ANEC
Tania Vandenberghe, ANEC

Objectives of 2025 campaign:

The objectives set at the start of the year were as follows:

1. To encourage more European governments to make it mandatory to install smoke alarms in domestic properties and to provide information on how this could be achieved.
2. To encourage fire services in European countries to actively take part in smoke alarm campaigns and Home Fire Safety Checks.
3. To encourage and support our new target countries for 2025, namely Lithuania and Malta to get involved in this year's campaign.
4. To educate the public about smoke alarms and the benefits of installing them.

Target Audience:

The campaign will target new European countries, namely **Lithuania and Malta** while continuing to support our target countries for 2023 and 2024.

Activities planned:

- 1. Partnerships:** The campaign led by the European Fire Safety Alliance and Federation of European Fire Officers will create partnerships with fire service organisations, fire safety organisations in Europe, with fire associations in our target countries, European MEP's, EU Commission officials, fire personnel from

local fire departments, smoke alarm companies, local authorities, to raise awareness and to distribute and install smoke alarms.

2. **Campaign website** – We will update our campaign website to deliver a more segmented approach to raising awareness about smoke alarms for three different audiences, namely, national/regional government, local fire service and consumer. The website and available information will be translated into a greater number of European languages.
3. **Social media campaign:** We will relaunch our social media campaign on our existing website www.europeansmokealarmday.eu and on various platforms such as Facebook, Twitter, Instagram and LinkedIn. We will add Tik Tok as a social media channel for this year's campaign. We will target audiences in our target countries and in other European countries and share advice, tips on fire safety and smoke alarm installation, usage and maintenance. We will add additional content and safety messages. This year's campaign will run from the end of October 2025 until Christmas 2025.
4. **Online resources:** Flyers, brochures, posters, infographics, animations, testimonial videos and other information will be made available online for the target groups above to help them promote their local campaigns and to raise awareness.
5. **Smoke Alarm Day webinar:** The European Fire Safety Alliance and our partners will organise an online webinar on Friday 7th November and invite speakers to share their experience of
 - a) installing smoke alarms as a key measure to reduce the number of fatalities in residential buildings
 - b) why it is worth introducing legislation / regulations on installing smoke alarms and how to do that
 - c) organising smoke alarm campaigns
 - d) examples of good campaigns in European countries

Stakeholders from national governments, EC officials, MEP's, fire service personnel, smoke alarm companies and large retailers will be invited to attend.

Section 3 - Results and outcomes achieved:

1 Partnerships: Malta and Lithuania joined our campaign. Representatives from their national fire associations joined our Working Group meetings and put in place campaigns at national level to create greater awareness about smoke alarms.

Our Working Group met monthly during 2025.

2 Campaign website

We restructured our website www.europeansmokealarmday.eu to comply with the European Accessibility Act. We updated our campaign website with additional content and translated the website into a total of 12 languages. We translated the downloadable smoke alarm leaflets into 10 languages in total. We added social media links for our social media channels.

3 Social media campaign: We relaunched our social media campaign on our existing website www.europeansmokealarmday.eu and on various platforms such as Facebook, Twitter, Instagram and LinkedIn. We added Tik Tok as a social media channel for this year's campaign. We added a number of new messages to this year's campaign. The social media campaign ran successfully from 22nd October to 20th December 2025.

The 15 key messages used as part of this year's campaign are included in Appendix 5.

An evaluation of the impact of this year's social media campaign was carried out at the end of the campaign.

The metrics used were to

- Number of followers,
- No of impressions
- No of posts
- Post interactions and the ranking of posts
- Monitor website traffic to the campaign website in each partner country.

The results are included in Appendix 6.

4 Online resources: We created additional online resources for our three target audiences

We added two very powerful testimonial videos from survivors of two real fires, one in Belgium and one in Malta.

5 Smoke Alarm Day webinar: The European Fire Safety Alliance and our partners organised an online webinar on Friday 7th November as part of the programme of

activities for European Fire Safety Week 2025. We invited speakers to share their experience of

- installing smoke alarms as a key measure to reduce the number of fatalities in residential buildings
- why it is worth introducing legislation / regulations on installing smoke alarms and how to do that
- organising smoke alarm campaigns at national level
- examples of good campaigns in European countries

Details of the speakers are included in Appendix 3.

A recording of the webinar on YouTube and the presentations delivered by the various speakers are available on the European Fire Safety Alliance website www.europeanfiresafetyalliance.org.

Appendix 1 – Partner Country reports

A number of partner countries submitted reports on the activities and campaigns they organised locally to promote smoke alarm awareness in their own countries.

The countries are

Spain
Estonia
Czechia
Malta
Latvia
Poland

These are included below:

Spanish Report 2025

The most noteworthy event in Spain in 2025 is that in November the Ministry of Housing and Urban Agenda presented the draft royal decree modifying the Technical Building Code.

Fire Safety Modifications

Changes are being introduced to the Basic Document on Safety in Case of Fire (DBSI) to improve safety.

- The fire reaction requirements for facade materials are being reviewed, aligning them with European regulations following recent incidents.
- Safety requirements in parking lots are increasing due to the proliferation of electric vehicles, which present specific fire risks.
- A new requirement for stand-alone smoke alarms is being introduced in residential buildings.

The Technical Building Code modification project includes the installation of detectors for all newly built homes and all those in which a comprehensive rehabilitation is carried out.

The scope of the CTE (Article 2) applies to new building construction and interventions in existing buildings, such as extensions, renovations, and changes of use (Annex III, Terminology). Therefore, the modification of the CTE applies in the same cases.

A period for contributions was opened, until December 9, in which there were many suggestions made by various organizations, including APTB.

Its entry into force is expected in the second half of 2026.

Currently, the only place in Spain where it is mandatory to install smoke alarms in homes is the city of Valladolid. This obligation is regulated in article 433.2 of the General Urban Development Plan of Valladolid, since 2020 for new construction and rehabilitated housing, and since March 2025 for existing ones.

<https://bocyl.jcyl.es/boletines/2020/06/19/pdf/BOCYL-D-19062020-17.pdf>

During Fire Prevention Week 2025 in Spain, organized by APTB and Fundación MAPFRE in collaboration with 30 fire services, smoke alarms continued to be the focus of attention.

Also in 2025, Fundación MAPFRE and APTB collaborated once again with the associations of property administrators in different provinces of Spain to install smoke alarms in the homes of vulnerable people (elderly people living alone, people with disabilities, etc.), as well as to distribute educational material on fire safety and smoke alarms.

Estonian Report 2025

During the last week of September 2025, the Estonian Rescue Services Agency carried out inspections in the homes of Estonian residents to check the presence of smoke detectors and carbon monoxide detectors. Over the course of five days, a total of 5,300 homes were inspected based on a random sample.

The inspections showed that 83% of homes had a functioning smoke detector, and in 86% of the homes where a carbon monoxide detector is required under Estonian fire safety regulations, it was also present. In addition, we communicated through the media that such inspections were forthcoming, which resulted in a sharp increase in smoke detector sales in stores.

In addition, Estonian rescuers carry out home safety visits where they talk to residents about fire safety. If a household is economically disadvantaged and has children, or if a resident is elderly or has a physical disability that makes it difficult for them to install a smoke detector on their own, the rescuers will install the smoke detector for them. Last year, rescuers conducted more than 14,000 home safety visits and installed hundreds of smoke detectors.

In December 2025 we carried out another smoke alarm awareness campaign in Estonia. We used television, radio, and in-store radio channels as the main means of communication.

The core message of the campaign was: *“A functioning smoke alarm will save your life even if your lifestyle and home are safe, but your neighbour’s are not.”*

In-store radio announcements additionally emphasised that every home must have a working smoke alarm, noting that it also makes a suitable Christmas gift for family members and other loved ones.

Czechia Report 2025

SUMMARY OF „SMOKE ALARMS SAVE LIVES” ACTIONS IN 2025 IN CZECH REPUBLIC

Actions carried out and completed in 2025 in CZECH REPUBLIC:

- promotion and sharing information about activities among CAFO members, professional and volunteer firefighters in Czechia, experts and public at seminars organized by CAFO
- publishing information and promoting European Smoke Alarm Day on social networks and cooperation with fire rescue brigades in Czechia in promoting fire detection in the household's propagation of the activity on the CAFO internet portal focused on the issue of detecting fires and dangerous gases in households <http://www.detektory.cahd.cz/>
- Promotion of the installation of detectors and the show on Czech Television in the “Dobré ráno” show on the public broadcaster Czech Television, both in spring and during the Advent season
- presentation of the installation of detectors and the program during a public discussion program as part of a music festival Colours of Ostrava 2025
- preparation of the analysis of deaths in household fires in Moravian-Silesian Region in Czechia

Main challenges for 2026:

- preparation of an analysis of fire deaths in the households in CZECH REPUBLIC

- promotion of the installation of detectors and the program on social media

Martin Nekula
Vice-president of CAFO

Maltese Report 2025

Malta Smoke Alarm Awareness Campaign – 2025

A short report detailing the activities carried out in 2025 to promote smoke alarm awareness in Malta.

Introduction

As part of the wider European Smoke Alarm Campaign, Malta has continued its efforts throughout 2025 to strengthen public awareness on the importance of smoke alarms in domestic properties. This initiative forms part of the broader European objective of supporting target countries — including Malta — to actively participate in this year's campaign and enhance public safety through prevention and early-warning measures.

Campaign Objectives

The 2025 Malta campaign aims to:

- Encourage active involvement in this year's European smoke alarm initiative.
- Educate the public on the benefits of installing smoke alarms within homes.

Campaign Activities in Malta (2025)

Throughout 2025, Malta contributed actively to the European campaign by implementing a series of outreach and educational initiatives designed to reach households, local councils, and vulnerable communities.

Key activities included:

- **Public Education Sessions:** Fire safety talks delivered through local councils, community centres, and schools to increase awareness on smoke alarm installation and maintenance.
- **Digital Awareness Drive:** Use of social media and the European campaign website to share multilingual content and instructional materials developed at European level.
- **Support for High-Risk Households:** Direct outreach targeting older persons, low-income families, and high-risk dwellings to provide guidance on smoke alarm placement and basic fire safety behaviours.

Outcomes & Impact

Malta's involvement in the 2025 campaign contributed to:

- Improved visibility of smoke alarm benefits among the general public.
- Strengthened partnerships between national agencies, industry stakeholders, and European counterparts, setting the groundwork for future cooperation.
- Increased engagement from organisations and citizens expressing interest in participating in upcoming campaign years.

These collaborative efforts are expected to continue reducing fire-related injuries and fatalities within domestic settings across Europe, including Malta.

In Malta, there was a long-held belief that solidly constructed houses were immune to fires, and any blaze would stay contained within its room of origin. This was once true due to low fire loads but rising living standards have changed that. The Civil Protection Department (CPD), which took over fire services from the Police in 2000, has seen more homes affected by fire as building styles change and more people live in apartments, partly due to increasing land prices and an increase in the mentality of high-rise developments. Fires now impact multiple families in apartment buildings, whereas previously only the household in a single dwelling was affected. The scope of the department joining the European campaign is to encourage more houses tenants and the government to make it mandatory to install smoke alarms in domestic properties and to provide information on how this can be achieved. After joining this campaign, our fire stations aimed to promote smoke alarm initiatives, encourage home fire safety checks, and inform the public about the advantages of installing smoke alarms.

By working in partnership with the European smoke alarm alliance we set up to produce a film on the subject, a few weeks before the department was called onto a fire in a house of a singer which was aired on the local TV incidentally there was also a renowned radio DG which also had a fire in his house and as these two public persons gone through this misfortune and I was invited on a local program were I took this opportunity to encourage the viewers to install a smoke alarm as if a smoke alarm was installed they would have not gone this misfortune.

I have invited one of the participants, a local singer with firsthand experience in successful appeals, to join our initiative. Her involvement has enhance our efforts to raise awareness about the importance of smoke alarms in domestic properties across Malta. This initiative aim was to reduce a significant risk to the safety and wellbeing of citizens throughout Malta.

After coordinating schedules, our media team successfully conducted the interview with the singer, the filming was made, it was sent for review to the European smoke alarm alliance team for their review, the feedback was to shorten the film, our media team edited the film, it was resent again to have it re-evaluated, to the satisfaction of the European Smoke Alarm Alliance committee.

The smoke alliance committee have also shared with us the smoke alarm leaflet which had to be translated into the Maltese language, it was translated into the Maltese language by an officer from the ministry of the home affairs, it was sent to Ms Loreta Kelbauskaite were it was transferred to a leaflet bought in English and in Maltese, I've assigned one of our officers, who also handles EU matters for CPD, to oversee the printing project. He informed me that he has handed over the task to our media officer for printing. regretfully to date it has not been published, it is place on the department social media platform.

In the meantime, on the 6th and 7th of November 2025, CPD participated in a segment on the national TV station where we encouraged the public to install smoke and carbon monoxide detectors. We also promoted this initiative on our social media platforms, we have also designed a poster and following to received positive feedback on the

poster by Ms. Loreta Kelbauskaite, it was also placed on the department social media platform.

Finally, the Director General has recently informed me that he had a meeting with the Honourable Minister for Home Affairs and National Security. During this meeting, the minister expressed interest in utilizing a special fund to sponsor smoke detectors and fire blankets for vulnerable individuals. We have forwarded the costs for a smoke alarm and fire blankets for the ministry to work on this proposal.

The department has again been invited by the national TV station to participate in a breakfast show, to speak about home fire safety, where all the different officers have been encouraging the viewers to install a smoke detector as the benefits of installing a fire alarm is far more less than going into the expenses of redecorating the house after the devastation that a fire can leave behind.

The scope for the Smoke Alarm campaign is to provide the department new ways of spreading our life saving campaign, reaching households at risk, helping fire services to continue to raise awareness and to influence national governments to introduce legislation to make smoke alarms mandatory in domestic homes.

I look forward to work on the campaign for 2026 to achieve even more success, in encourage the government officials, in fire safety regulations in order continue to reduce fire deaths and injuries in domestic homes both locally and in Europe.

These collaborative efforts are expected to continue reducing fire-related injuries and fatalities within domestic settings across Europe, including Malta.

Conclusion

The Civil Protection Department Malta's 2025 Smoke Alarm Campaign contributed significantly to Europe's home fire safety initiative. Malta strengthened partnerships, improved public education, and assisted vulnerable households to advance fire prevention and encourage smoke alarm use in all homes.

Latvian Report 2025

State Fire and Rescue Service (SFRS) of Latvia – Activities to Promote Smoke Detectors in 2025

On 22 November 2023, the State Fire and Rescue Service (SFRS) launched the public awareness campaign *"Home Safety Is in Your Hands"*, which continued throughout 2024 and 2025. The campaign maintained its core approach: distributing and, where possible, immediately installing smoke detectors in homes where a minor fire had occurred and no smoke detector had been installed by the occupants. In addition, firefighters and rescuers reminded residents of the importance of smoke detectors, how they operate, and the need for regular testing.

Through this campaign, firefighters and rescuers distribute smoke detectors to more than 500 households each year. The campaign is planned to continue in 2026, thereby improving fire safety in homes and potentially saving lives.

In 2025, the SFRS also continued delivering lectures in educational institutions and participating in various third-party events, where, alongside broader safety information, the importance of having smoke detectors installed at home was emphasized.

Furthermore, in daily communication with the media and the public regarding fires and incidents, information is provided on whether a smoke detector was present in the dwelling involved, highlighting the importance of installing and maintaining smoke detectors.

The importance of smoke detectors is also regularly addressed in interviews given by SFRS officials and on the SFRS social media channels. For example, on 22 November 2025 the SFRS published a post reminding residents about the importance of smoke detectors:

<https://www.instagram.com/p/DRWet4xjUOo/?igsh=MXJkamRxM2tjdXprdw==>

Overall, the promotion of smoke detectors as a key measure for improving residential safety is consistently integrated into the SFRS's communication activities.

Poland Progress Summary Report 2025 - Smoke Alarm Under Each Roof Programme

1. Strategic Positioning and Programme Design

The programme is a national initiative embedded within the FLORIAN 2050 Strategy, led by the Association of Voluntary Fire Services in Poland. It is designed as a

scalable, long-term programme focused on raising public awareness of home fire safety and promoting smoke alarm adoption.

2. Delivery Mechanism: Home Fire Safety Checks (HFSC)

Home Fire Safety Checks are conducted by trained voluntary firefighters upon homeowner invitation. The visits focus on fire safety advice, emerging risks such as photovoltaics and e-mobility, and optional installation of smoke alarms. Data is captured through a central statistics module.

3. Scale and Reach (2024–2025)

37 out of 179 voluntary fire units are participating (~21%). A total of 936 HFSC visits were conducted, including 105 full interventions and 435 advisory-only visits. Smoke alarm deployment includes 388 installations, 39 distributed units, and 74 homeowner-installed devices.

4. Partnerships

The programme is supported by European Fire Safety Alliance, Federation of European Fire Officers, national research institutions, state fire services, and private sector manufacturers including AISKO, Kidde, Ei Electronics, and Eura-Tech.

5. Regulatory Development

A major regulatory change in November 2024 mandated smoke and CO alarms in all homes in Poland, with a compliance deadline of 2030. This significantly strengthens the programme's impact and scalability.

6. Role of Voluntary Fire Services

The voluntary fire service network includes 16,000 units and 640,000 members, providing strong local reach, particularly in rural areas. This network is central to programme delivery.

7. Digital Platform

The website www.testbezpieczenstwa.pl supports registration, scheduling, and data reporting, enabling scalable programme management.

8. Key Achievements

Nearly 1,000 home safety engagements and over 500 smoke alarms deployed or facilitated. Strong alignment with national legislation and multi-stakeholder collaboration achieved.

9. Outlook (2026–2030)

The programme is positioned for national scale-up supported by regulation, procurement, and expanded participation. It is expected to evolve into a key implementation mechanism for compliance.

Appendix 2 – Testimonials from the smoke alarm companies

Smartwares is proud to contribute to raising awareness across European countries. We are encouraged by the enthusiasm and commitment shown by the firefighters who support and help deliver this important message. We are seeing a growing willingness among consumers to purchase and install life-saving devices, and we look forward to seeing the campaign develop even further in the coming years.

Sanne Michielsen, Smartwares, Netherlands

"Ei Electronics is delighted to be involved with EU Smoke Alarm Day. Our more than 50 years of experience in this area has taught us the importance of awareness of the danger of fire in the home. The Smoke Alarm Day campaign reminds us that 80% of European fire deaths happen in the home and many of these can be avoided if a working smoke alarm is present."

Leo Clancy CEO Ei Electronics Ireland

"As partner of the European Fire Safety Alliance, FireAngel is proud to support the European smoke alarm campaign.

Education is key in the broad adoption of smoke alarms in all countries in Europe and awareness about the dangers of residential fires and the major role smoke alarms play in the prevention is a strong pillar towards this education".

Véronique Vasquez, European Marketing Manager, UK

Appendix 3 – Smoke Alarm Webinar 2025

The webinar was organised for European Smoke Alarm Day, Friday November 7th.

The webinar title was called ‘Hear the Alarm – Save a Life’. This was confirmed following a LinkedIn poll.

The panel of speakers arranged was as follows:

Welcome and introduction (Moderator)

Veerle De Decker, European Fire Safety Alliance

Introduction to European Smoke Alarm Campaign 2025

Finian Joyce, Vice Chair of European Fire Safety Alliance

Household fires and the life saving role of smoke detectors

Tania Vandenberghe, Senior Programme Manager, ANEC

Experiences of a fire incident survivor in Belgium

Paul van Goethem, Journalist

Can you hear the Alarm? How to make smoke alarms accessible

Thorsten Teichert, Chair of Euralarm Task Group on Domestic Life Safety

Lessons from Smoke propagation research

Lieuwe de Witte, National Institute for Public Safety in the Netherlands

Smoke Alarm Under Each Roof – Update from successful smoke alarm campaign in Poland

Robert Klonowski, Deputy Director of Civil Protection and Crisis Management Department, Ministry of Interior and Administration, Poland

The webinar was attended by a total of 120 delegates online.

Appendix 4 – Social Media Campaign 2025

The following 15 social media posts were developed for our 2025 campaign. They were circulated and posted in English. They ran from 22nd October to 20th December 2025.

They were posted on four social media channels including Facebook, X, Instagram and LinkedIn.

Social Media messages used in 2025 campaign

Date	Theme / Topic	Content Type / Visual	LinkedIn post
2025 10 24	Campaign Launch	EuroFSA website or Smoke Alarm website	 We are pleased to launch the Smoke Alarm Campaign 2025 – a Europe-wide initiative promoting home fire safety and the life-saving importance of smoke alarms. As part of the European Fire Safety Week, we invite you to join the webinar on 7 November 2025, from 11:00 to 13:00 CET.   Full programme & registration: https://www.europeanfiresafetyalliance.org/european-fire-safety-week/edition-2025/7-11/  Together with partners across Europe, we're raising awareness and sharing good practices to make homes safer and prevent fire-related tragedies. #EuropeanFireSafetyWeek #SmokeAlarmsSaveLives #SmokeAlarmDay

2025 11 18 Testimonial – Maltese singer

🗣️ “Obviously, there would still be the effects of what occurred, which involves nightmares and wake up in shock and memories of what took place. But obviously, life goes on.”

In this powerful testimony, a well-known Maltese singer Ellul shares how a fire broke out in her home, how every second mattered, and how she escaped.

Real voices. Real survival. Real protection.

These stories remind us that fire can happen to anyone — and that prevention starts with awareness.

Because behind every statistic, there’s a person. A voice. A survivor.

💬 Now we want to hear from you.

Have you had an experience with fire safety — or a story about how smoke alarms made a difference? Share it in the comments and help spread awareness across Europe.

2025 11 21 Test your alarm

Photo + text quote

🔔 Safety starts with one simple step: test your smoke alarm.

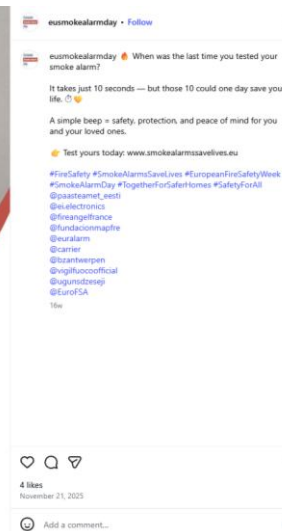

It's quick, easy, and can make the difference between a close call and a tragedy.

Let's make testing smoke alarms part of our safety culture — at home, at work, and in our communities.

📱 Share this reminder with your team, your family, your friends.

2025 12 Safety isn't just about rules Illustration
03 — it's about care

♥ Safety isn't just about rules — it's about care.

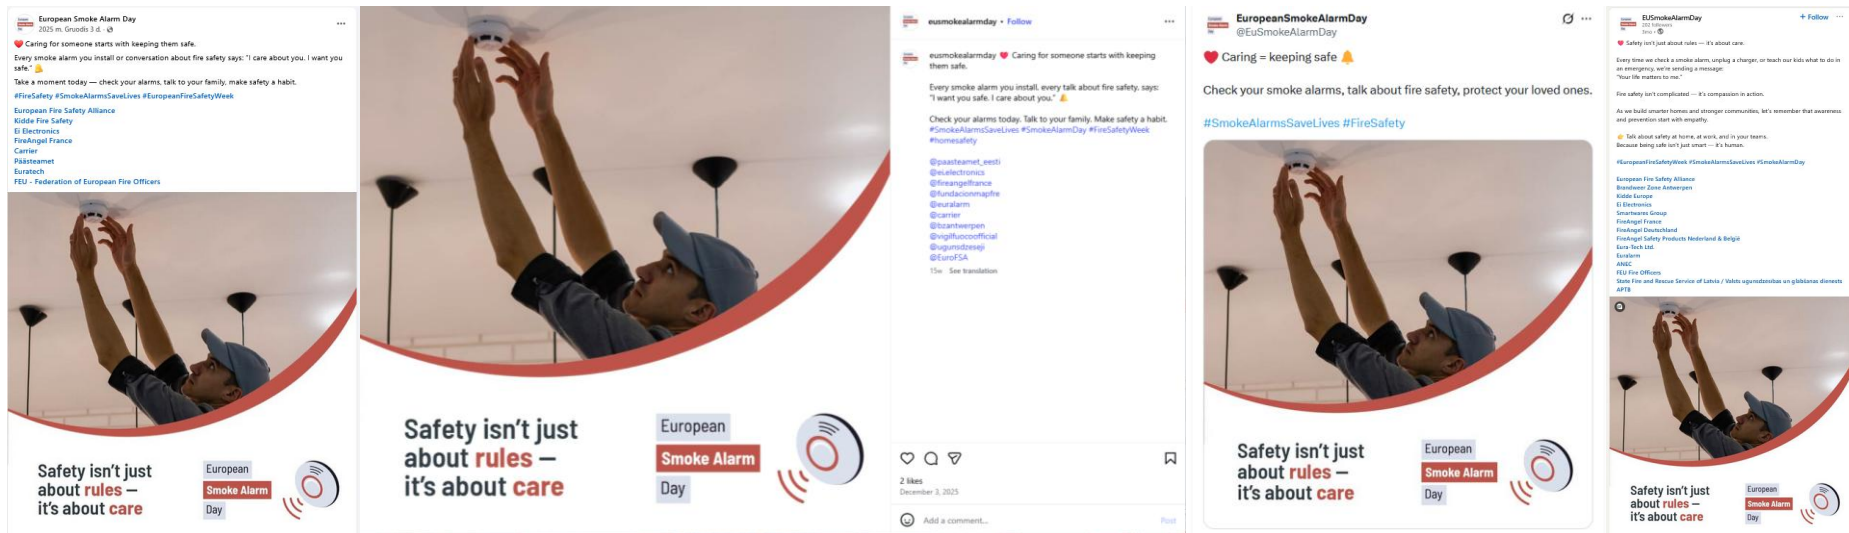

Every time we check a smoke alarm, unplug a charger, or teach our kids what to do in an emergency, we're sending a message:
“Your life matters to me.”

Fire safety isn't complicated — it's compassion in action.

As we build smarter homes and stronger communities, let's remember that awareness and prevention start with empathy.

🔑 Talk about safety at home, at work, and in your teams.
Because being safe isn't just smart — it's human.

2025 12 10 Gen Z Contest Announcement

Gen Z Contest Announcement

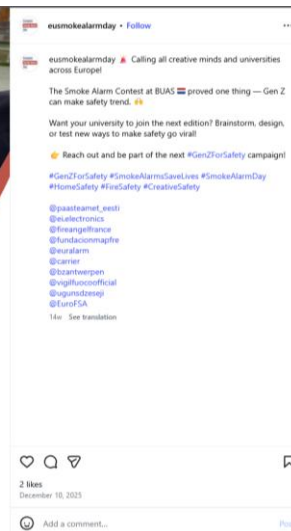

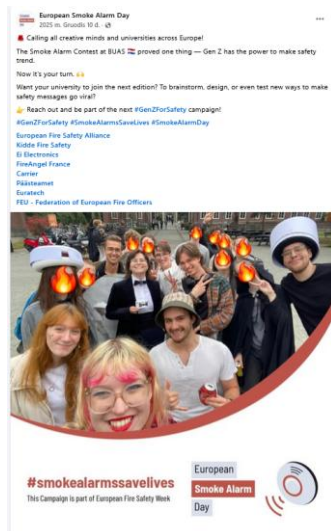

👋 Inspiring creativity from the next generation of changemakers!

This year, students at BUAS – Breda University of Applied Sciences (Netherlands) took part in a Smoke Alarm Contest, exploring how design, storytelling, and innovation can promote fire safety.

Their projects prove that Gen Z doesn't just follow trends — they create them.

🕯️ Would your university like to take part in future campaigns? Join us and let's make safety go viral across Europe.

#GenZForSafety #EuropeanFireSafetyWeek #SmokeAlarmsSaveLives #SmokeAlarmDay

2025 12 17 Holiday season

Holiday illustration

🎁 Give the gift of safety.

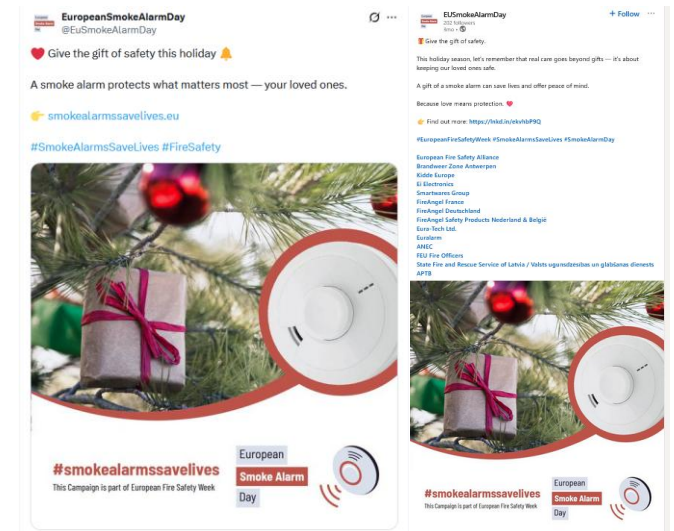

This holiday season, let's remember that real care goes beyond gifts — it's about keeping our loved ones safe.

A gift of a smoke alarm can save lives and offer peace of mind.

Because love means protection. ❤️

Appendix 5 - Tik Tok campaign 2025

TIK Tok posts for 2025 campaign

Footage	Captions	Description
	Not sure how this tells you about smoke alarms, but she said this would slay #GenZ #GenZEdit #SmokeAlarmAwareness	A video explaining the importance of smoke alarm and fire safety awareness that's heavily edited for comedic effect.
	Guys, please, I spent too much time editing this to get fired #SmokeAlarmAwareness #fyp	A video picturing a smoke alarm with the words "Guys I lied on my cv and got a job marketing smoke alarm awareness, pls blow this up so I don't get fired" over it, followed by a heavily edited slideshow of smoke alarms.
	Idk I think they popped off #fyp #SmokeAlarmAwareness	A video of an established member of staff reading a "gen-z" written script, including current slang and references

WE LOVE SMOKE ALARMS #fyp #rankings #top5
#SmokeAlarmAwareness

A video ranking smoke alarm sounds with slight explanations of reasoning.

I think they're on to something... #fyp

A street interview style video where people are asked what the most attractive quality in a partner is, all the people asked reply "Have functioning smoke alarms"

yes

Repeating picture of a smoke alarm.

Were just trying to keep you safe #fyp #adhd
#firesafety #GenZ #GenZEdit
#SmokeAlarmAwareness

A video of somebody explaining smoke alarm safety with a caption "Trying to explain why smoke alarms are important to gen z", as the camera pans away the person snaps at the individual holding the camera, and pulls up a video of subway surfers to hold their attention.

At least she's excited #fyp
#SmokeAlarmAwareness #GenZ

A video of two team members being confused with the caption "When your company hires a Gen-Z", ending with a shot of the Gen-Z hire looking happy, holding up a sign that says "I love smoke alarms"

Should I get it??? #fyp #thrifthfinds

A video captioned "go to the thrift store, that's where the heat is at, the heat:" panning over to show a shirt that says "I love smoke alarms"

I'm fine.... :(#fyp #smokealarms
#SmokeAlarmAwareness

A message thread where a text is sent "Do you want to talk about smoke alarms today?", the other person responds "not really", the texter writes out a few sad messages, but sends "that's fine :)" before we see them swipe away different apps with various information on smoke alarms

Bare minimum or princess treatment challenge,
difficulty: extreme #fyp #princesstreament

Replicating the "Bare minimum or princess treatment" trend but with questions about smoke alarms, when getting a question "wrong" the person is hshot witha water gun

Do it! #fyp #boxtrend

A person who's about to get hit with a box says "Oh? Were you waiting for that box to hit me? Well I was waiting for you to make sure your smoke alarm is working. Go on. I'll wait", the clip ends with the box hitting them.

Best aesthetic #fyp #rareaesthetic #trend

Following the rare aesthetic trend, collages of smoke alarms with the caption "Rare aesthetic: working smoke alarms"

Bringing our dreams to reality 💖 #fyp
#smokealarms #costume contest

A video about setting up a "Smoke Alarm Costume Contest"

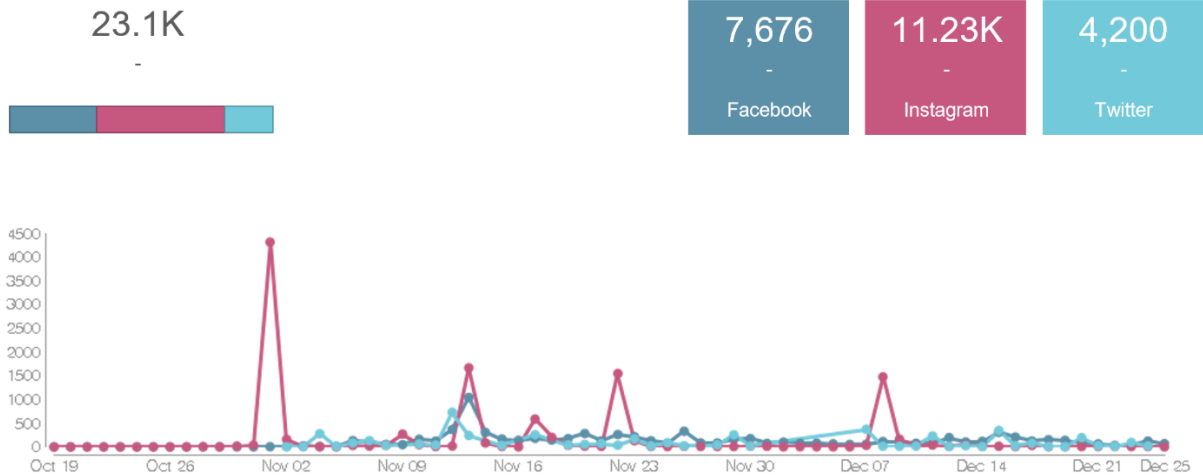

There can only be one true smoke alarm #fyp
#costumecontest #lookalike #smokealarms

A video rating peoples outfits and picking a winner at the "Smoke Alarm Costume Contest"

Social Media Campaign Impact Report

Facebook, Instagram, X and LinkedIn

Reporting period in source deck: 23 October 2025 to 17 December 2025

Executive summary

- The campaign generated 11,903 measurable impressions, 844 interactions and 64 posts across the four channels, while the combined audience reached 392 followers by the end of the period.
- LinkedIn was the clear growth and performance engine. It delivered 7,458 impressions (63% of total), 592 interactions (70% of total), 191 followers and the strongest follower growth (+112.22%).
- Facebook provided solid secondary reach with 3,491 views/impressions and 199 interactions from 16 posts. It also contributed one of the campaign's top five posts.
- Instagram added visibility and modest engagement, reaching 23 followers, 954 views and 53 interactions from 15 posts. Growth was concentrated early in the campaign and then flattened.
- X had a consistent posting cadence but minimal measured impact. The overview in the source deck reports 0 impressions and 0 interactions, while post-level slides show low single- and double-digit impressions. This report therefore treats X as a low-impact channel with inconsistent source measurement.

Campaign headline metrics

Audience	Reach	Engagement	Output
392 followers	11,903 impressions	844 interactions	64 posts

Figure 1. Impressions by channel

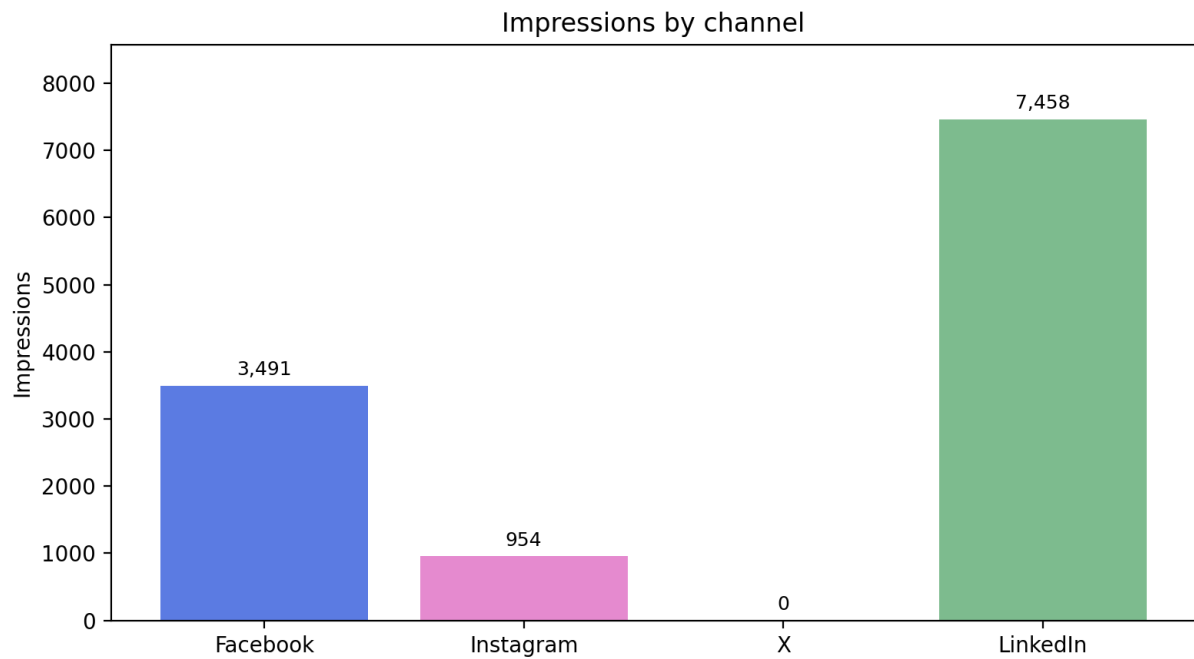

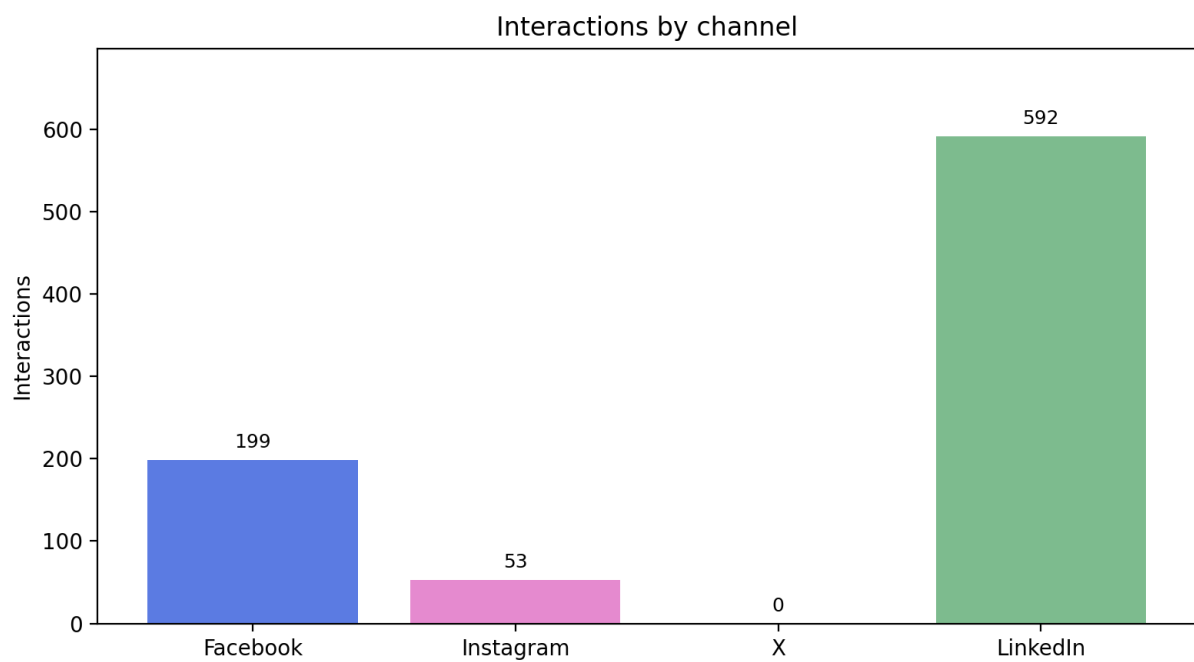

Figure 2. Interactions by channel

Channel comparison

Chan nel	Follo wers	Po sts	Impres sions	Interact ions	Impres sion share	Interac tion share	Impres sions per post	Interact ions per post
Faceb ook	156	16	3491	199	29.3%	23.6%	218.2	12.4
Instag ram	23	15	954	53	8.0%	6.3%	63.6	3.5
X	22	15	0	0	0.0%	0.0%	0.0	0.0
Linke dIn	191	18	7458	592	62.7%	70.1%	414.3	32.9

Channel-level findings

LinkedIn

- LinkedIn was the strongest platform on both scale and quality. It delivered 7,458 impressions and 592 interactions from 18 posts, or approximately 414 impressions and 32.9 interactions per post.
- Follower growth was the most significant of any channel, rising to 191 followers, up 112.22% across the period.
- The highest-performing post overall was a LinkedIn post published on 28 October about fire safety crossing language barriers. It generated 1,694 impressions and 130 interactions.

Facebook

- Facebook produced 3,491 views/impressions and 199 interactions from 16 posts, making it the second-largest contributor to campaign reach and engagement.
- The strongest Facebook post was the 31 October survivor quote, which recorded 514 impressions, 14 reactions, 3 shares and 17 clicks.
- Performance peaked in late October and early November, especially around launch messaging and survivor-story content.

Instagram

- Instagram remained a smaller but growing channel. It closed the period on 23 followers, up 21.05%, with 954 views and 53 interactions from 15 posts.
- The account appears to have gained nearly all follower growth by early November; after that point the audience was essentially flat.

- Engagement was highest around testimonial and launch posts, but overall reach per post remained modest relative to LinkedIn and Facebook.

X

- X maintained a regular publishing cadence with 15 posts and a stable follower count of 22.
- However, the source deck contains a data-quality issue: the campaign overview reports 0 impressions and 0 interactions for X, while post-level tables show small impression counts per post.
- For publication purposes, X should be described as a low-impact support channel rather than a driver of campaign outcomes.

Figure 3. Audience size and posting volume

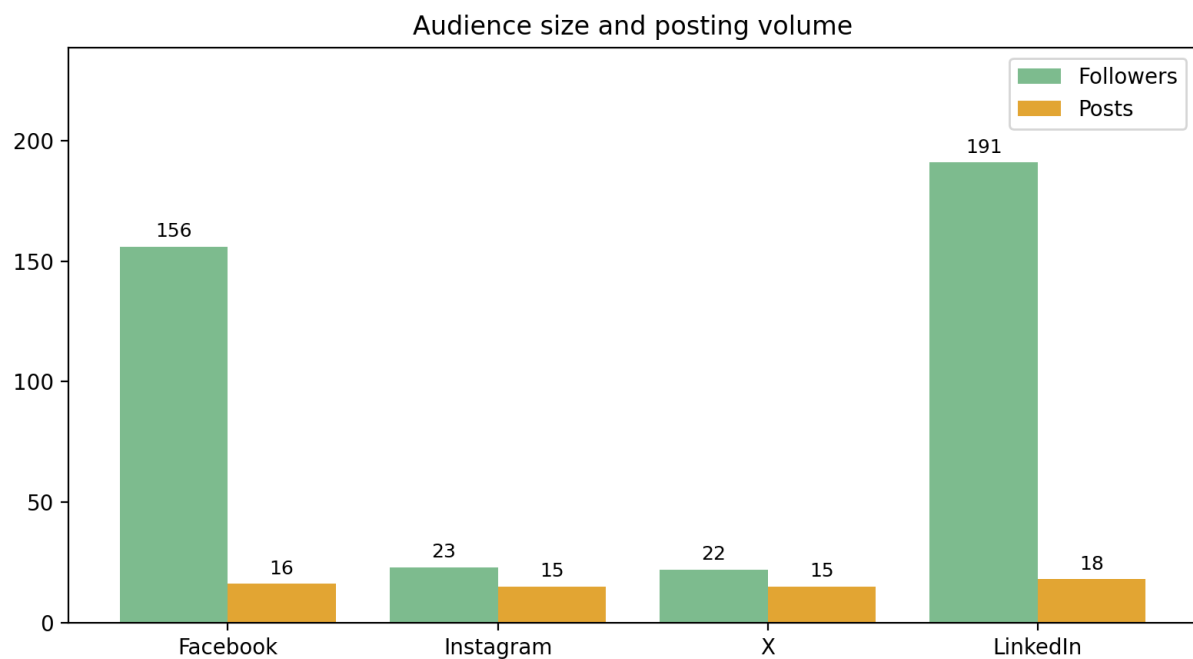

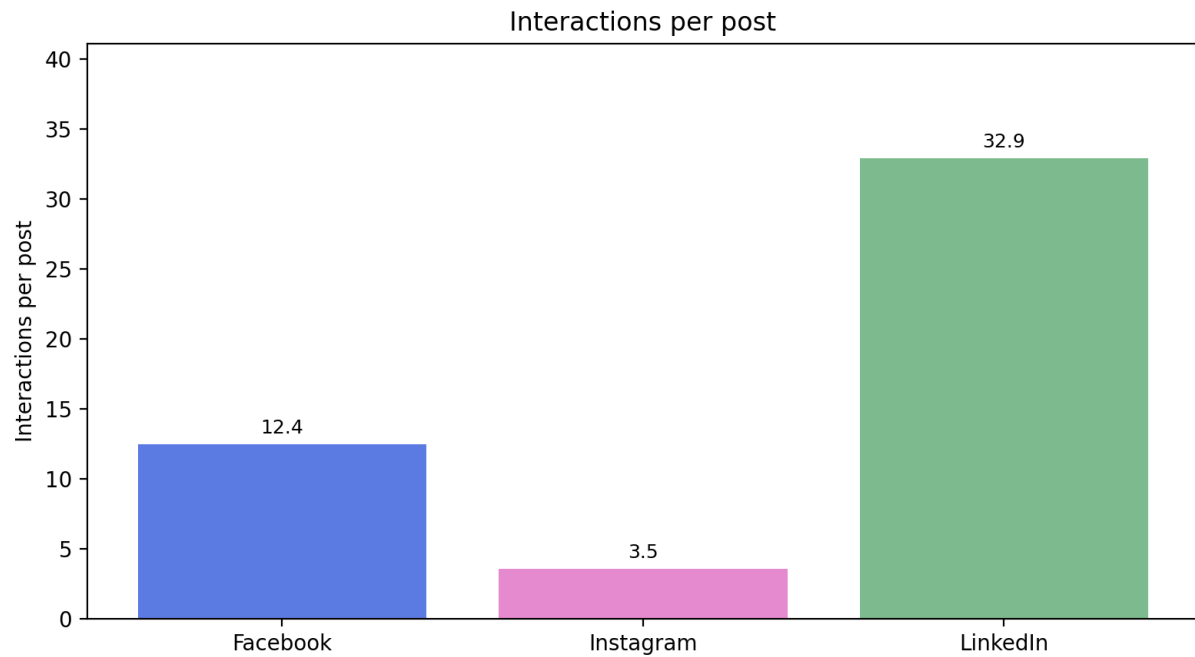

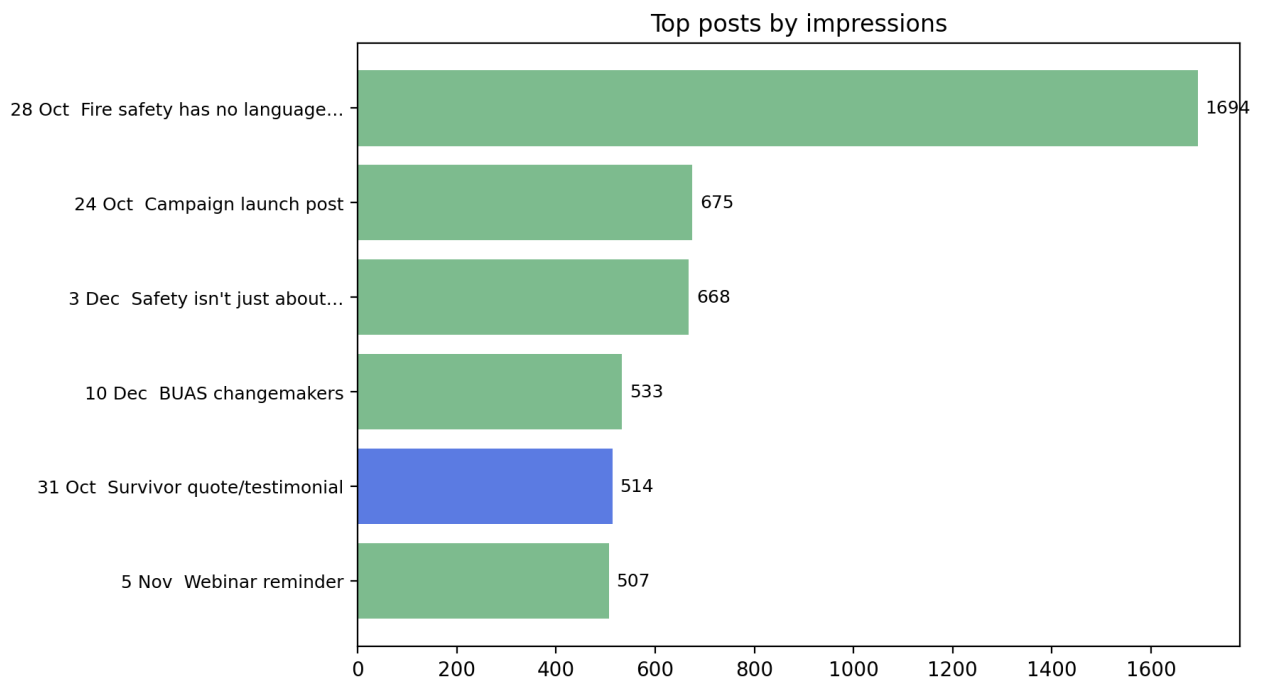

Figure 4. Interactions per post

Top-performing content

The campaign's best-performing posts were concentrated on LinkedIn and clustered around launch, survivor-story and youth-engagement themes.

Date	Channel	Theme	Impressions	Interactions
28 Oct	LinkedIn	Fire safety has no language barriers	1694	130
24 Oct	LinkedIn	Campaign launch announcement	675	50
3 Dec	LinkedIn	Safety isn't just about rules	668	51
10 Dec	LinkedIn	BUAS changemakers / youth creativity	533	54
31 Oct	Facebook	Survivor quote / testimonial	514	34

Conclusion and summary

European Smoke Alarm Day's 2025 social media campaign achieved clear multi-channel visibility, with the strongest impact delivered through LinkedIn and useful secondary support from Facebook. Across the available reporting period, the campaign generated 11.9K impressions, 844 interactions and 64 posts, while total followers reached 392. The best-performing content combined practical fire-safety messaging with human stories, campaign-launch news and youth-facing creative content. LinkedIn should be prioritised as the lead channel for future campaign waves, Facebook should continue to carry testimonial and community-oriented posts, Instagram should focus on selective visual storytelling, and X should only be retained if reporting quality can be improved.

Appendix 7 – Analysis of Tik Tok campaign 2025

Purpose

This campaign was designed to increase awareness and influence fire safety behaviours among younger audiences, specifically promoting the importance of smoke alarms in domestic settings. The initiative aligns with broader public safety objectives to reduce preventable fire-related injuries and fatalities.

Key Outcomes

- Total Reach: 263,286 views
- Engagement: 24,400 likes and 421 comments
- Followers Gained: 512
- 14 videos produced
- One lead video generated 244,000 views, significantly amplifying campaign reach

Public Safety Impact

The campaign successfully engaged a traditionally hard-to-reach audience (Gen-Z) using culturally relevant and platform-native content. High engagement levels indicate strong message resonance, which is a critical precursor to behavioural change.

The content approach—peer-style delivery, short-form storytelling, and informal tone—aligns with best practice in modern public safety communications, particularly where traditional messaging has limited impact.

Performance Assessment

The campaign exceeded typical digital engagement benchmarks, demonstrating the effectiveness of TikTok as a public safety communication channel. However, follower conversion rates were comparatively low, indicating an opportunity to strengthen ongoing engagement and retention strategies.

Impact was concentrated in a small number of high-performing videos, highlighting the importance of identifying and scaling successful content formats.

Strategic Implications for Public Safety

- TikTok is a viable and effective channel for delivering life-saving messages to younger audiences
- Relatable, peer-led messaging significantly increases engagement and message retention
- Short-form video content can complement traditional fire safety campaigns and extend reach

- There is clear potential to influence awareness and behaviour at scale when content is optimised

Conclusion

This campaign demonstrates that digital-first, audience-centric approaches can significantly enhance the effectiveness of public safety communications. With further optimisation and integration into broader fire safety strategies, TikTok campaigns can play a critical role in reducing risk and improving household safety outcomes.
