Appendix 7 – Review of 2024 social media campaign performance

Foreword

This year's smoke alarm campaign has built upon the foundations laid in 2022 and 2023 and acknowledges the great work being carried out at local and national level in many countries in Europe. We have continued to develop the considerable assets available on our campaign website www.europeansmokealarmday.eu and have added new languages and information.

By working in partnership with colleagues in our three target countries, smoke alarm companies, national fire associations and local fire services, we have helped to create greater awareness of the need for smoke alarms in domestic properties in Europe. This will help to drive down a major risk to the safety and wellbeing of citizens in Europe.

This report showcases the effective and innovative contributions that our partners have made as part of this year's campaign. The examples of national and local delivery in the report demonstrate the further potential for partners to collaborate in the future.

I would like to see these partnerships further develop and grow in the years ahead. We will welcome new partners to our Smoke Alarm campaign who will provide us new ways of spreading our life saving campaign, reaching households at risk, helping fire services to continue to raise awareness and to influence national governments to introduce legislation to make smoke alarms mandatory in domestic homes. Please contact us if you would like to get involved.

I look forward to working on our campaign for 2025 with all project partners to achieve even more success. I would encourage more government officials, fire safety organisations, insurance companies, consumer organisations, retailers or other stakeholders to contact us if you are interested in getting involved in the campaign. In this way we will continue to reduce fire deaths and injuries in domestic homes in Europe.

Finian Joyce

Vice Chair of European Fire Safety Alliance

Project Coordinator of EU Smoke Alarm Project

Contact details: fjoyce@eurofsa.org

Introduction

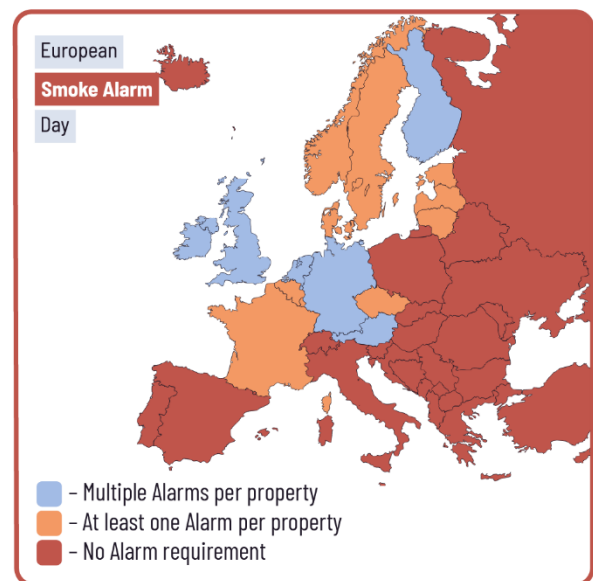

This year's EU Smoke Alarm Day was held on 22nd November as part of the programme of the activities of the 6th European Fire Safety Week 2024. It was the third edition of this European wide smoke alarm campaign. It built on the previous editions held in 2022 and 2023. It was jointly organised by the European Fire Safety Alliance, the Federation of European Fire Officers (FEU), a number of smoke alarm companies and national fire officer associations.

European Legislation / Regulations

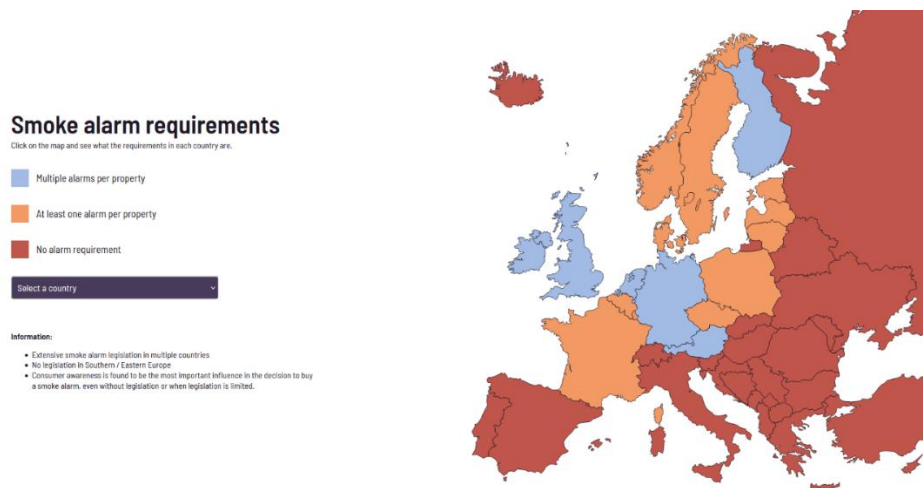

At the start of the 2024 campaign the position in terms of regulations and legislation relating to smoke alarms in domestic properties in European countries is shown below:

Legislation

- Extensive smoke alarm legislation in multiple countries.
- No legislation in Southern/Eastern Europe.
- Weak legislation/lack of enforcement is as bad as no requirement e.g. France 20% homes protected with working smoke alarms according to Fire Service Sources.

During 2024 we received confirmation from Poland that they were introducing regulations from 1st January 2025 to make it mandatory to install smoke alarms in domestic homes. The position at the end of the 2024 campaign shows the change achieved in the map of Europe.

Working Group

A Working Group consisting of European Fire Safety Alliance Core Group members, smoke alarm company representatives, representatives of fire officer associations in Europe and our IT partners Learnkey from Lithuania worked on this year's campaign over a number of months.

The members of the Working Group consisted of the following:

Finian Joyce, EuroFSA (Chair)
Krzysztof Biskup, EuroFSA
Veerle De Decker EuroFSA
Sanne Michelsen, Smartwares
Shane Lyons, EI Electronics
Daniella Durbusch, Gloria
Thorsten Teichert, Euralarm
Robert Klonowski (Dept of Interior, Poland)
Sagrario Moreno (APTБ, Spain)
Ignacio Perez (APTБ, Spain)
Martin Nekula (CAHD, Czech Republic)
Loreta Kelbauskaite Serpyte, Learnkey
Mindaugas Galeckas, Learnkey
Simon Jones, Carrier
Isabelle La Serre, Carrier
Laszlo Barta Vamos, Hungary
Tagne Tahe, Estonia
Sergejs Resuscans, Latvia

Objectives of 2024 campaign:

The objectives set at the start of the year were as follows:

1. To encourage more European governments to make it mandatory to install smoke alarms in domestic properties and to provide information on how this could be achieved.
2. To encourage fire services in European countries to actively take part in smoke alarm campaigns and Home Fire Safety Checks.
3. To encourage and support our new target countries for 2024, namely Latvia, Estonia and Hungary to get involved in this year's campaign.
4. To educate the public about smoke alarms and the benefits of installing them.

Target Audience:

The campaign will target new three European countries, namely **Estonia, Latvia** and **Hungary** while continuing to support our target countries for 2023, namely, Poland, Spain and Czechia and other countries in Europe.

Activities planned:

1. **Partnerships:** The campaign led by the European Fire Safety Alliance and Federation of European Fire Officers will create partnerships with fire service organisations and fire safety organisations in Europe, with fire associations in our target countries, European MEP's, EU Commission officials, fire personnel from local fire departments, smoke alarm companies, local authorities, to raise awareness and to distribute and install smoke alarms.
2. **Campaign website** – We will update our campaign website to deliver a more segmented approach to raising awareness about smoke alarms for three different audiences, namely, national/regional government, local fire service and consumer. The website and available information will be translated into a greater number of European languages.
3. **Social media campaign:** We will relaunch our social media campaign on our existing website www.europeansmokealarmday.eu and on various platforms such as Facebook, Twitter, Instagram. We will add LinkedIn as a social media channel for this years campaign. We will target audiences in our target countries and in other European countries and share advice, tips on fire safety and smoke alarm installation, usage and maintenance. We will add additional content and safety messages. This year's campaign will run from the start of November 2024 until end of December 2024.
4. **Online resources:** Flyers, brochures, posters, infographics, animations, videos and other information will be made available online for the target groups above to help them promote their local campaigns.
5. **Smoke Alarm survey:** The campaign will conduct a survey among the fire services in Europe to seek feedback from the practitioners about their experiences of smoke alarms at real incidents.
6. **Smoke Alarm Day webinar:** The European Fire Safety Alliance and our partners will organise an online webinar on Friday 22nd November and invite speakers to share their experience of
 - a) installing smoke alarms as a key measure to reduce the number of fatalities in residential buildings
 - b) why it is worth introducing legislation / regulations on installing smoke alarms and how to do that
 - c) organising smoke alarm campaigns
 - d) examples of good campaigns in European countries

Stakeholders from national governments, EC officials, MEP's, fire service personnel, smoke alarm companies and large retailers will be invited to attend.

Results achieved:

- 1 Partnerships:** We invited three new target countries, namely Hungary, Estonia and Latvia to join our campaign. Representatives from their national fire associations joined our Working Group and put in place campaigns at national level to create greater awareness about smoke alarms. Our Working Group met monthly during 2024.

The progress report for each of the three new target countries is available in the Appendices.

Appendix 1 – Hungary

Appendix 2 – Latvia

2 Campaign website

We restructured our website www.europeansmokealarmday.eu to segment the messaging for our three target audiences, namely, national and regional governments, fire services and consumers. We updated our campaign website with additional content such as new educational games, success stories, examples of successful smoke alarm campaigns in other countries and advice for national governments on how to introduce legislation. We translated the website content and the downloadable smoke alarm leaflets into three additional languages, Hungarian, Latvian and Estonian bringing the total number of languages to seven. We added social media links for our social media channels.

- 3 Social media campaign:** We relaunched our social media campaign on our existing website www.europeansmokealarmday.eu and on various platforms such as Facebook, Twitter, Instagram. We added LinkedIn as a social media channel for this year's campaign. We added a number of new messages to this year's campaign. The social media campaign ran successfully from 1st November to 3rd January 2025.

The 15 key messages used as part of this year's campaign are included in Appendix 5.

An evaluation of the impact of this year's social media campaign was carried out at the end of the campaign.

The metrics used were to

- Number of followers,
- No of impressions
- No of posts
- Post interactions and the ranking of posts
- Monitor website traffic to the campaign website in each partner country.

The results are included in Appendix 6.

4 Online resources: We created additional online resources for our three target audiences

National Governments – we created a template for policy officials on how to successfully implement national regulations.

Fire Services – we added examples of successful smoke alarm campaigns organised in a number of European countries. We added additional messages of support for our campaign from fire officers in Europe.

Consumers – we added the 120s game to help householders escape successfully from a fire in a home.

5 Smoke Alarm survey: We organised a survey among fire service personnel with the assistance of FEU to seek feedback from the practitioners on the ground about their experiences of smoke alarms at real incidents.

We developed a series of questions as part of an online questionnaire and circulated it to firefighters in a number of EU countries. The results of the survey are available in Appendix 5.

6 Smoke Alarm Day webinar: The European Fire Safety Alliance and our partners organised an online webinar on Friday 22nd November as part of the programme of activities for European Fire Safety Week 2024. We invited speakers to share their experience of

- installing smoke alarms as a key measure to reduce the number of fatalities in residential buildings
- why it is worth introducing legislation / regulations on installing smoke alarms and how to do that
- organising smoke alarm campaigns at national level
- examples of good campaigns in European countries

Stakeholders from national governments, EC officials, MEP's, fire service personnel, smoke alarm companies were invited to attend.

Appendix 1 – Hungarian report

We used the Hungarian language version of the webpage <https://smokealarmssaveslives.eu/>, the information document made available in Hungarian language (<https://smokealarmssaveslives.eu/HU/messagesDownload>), and the game of 120 seconds (<https://rauchmelder-lebensretter.de/120S-escape/?lang=en>).

Fortunately we had some smoke alarm devices, that we could provide to our territorial organizations, and to citizens together with the information provided by the European Smoke Alarm project.

Circulating the information:

The general secretary of the National Fire Prevention Commission shared all the materials to the leaders and deputies of the Territorial Fire Prevention Commissions (19 County Directorates for Disaster Management plus the Capital). Also informed the Communication Service of National Directorate General for Disaster Management about the European Smoke Alarm Day. A presentation was made about the topic to the deputy-directors of disaster management directorates (20), who shared the information inside and outside their organizations.

The Territorial Fire Prevention Commissions spread the information to:

- the members of the commission,
- 24 hours professional operations control duty services,
- professional fire brigades,
- municipal fire brigades,
- company fire brigades,
- voluntary fire fighting associations,
- local governments, and to institutions of local governments
- schools, nurseries,
- representatives of condominiums,
- museums in connection with disaster management,
- family members of firefighters and disaster management professionals and volunteers.

Social media appearances:

The Communication Service of National Directorate General for Disaster Management referred to the European Smoke Alarm Day in the following post:

<https://www.facebook.com/share/p/19WJGzH8h1/?mibextid=WC7FNe>

In the following post after Christmas time the Communication Service of National Directorate General for Disaster Management referred directly to the Hungarian language web pages of <https://www.smokealarmssavelives.eu/> .

<https://www.facebook.com/share/p/14urpN9Fff/?mibextid=wwXlfr>

Website articles:

At least three County Directorates for Disaster Management and the National Directorate General for Disaster Management made the information available on their websites:

<https://katasztrofavedelem.hu/29/hirek/286927/fusterzekelok-europai-napja>

Csongrád-Csanád County Directorate for Disaster Management

<https://csongrad112.hu/course/view.php?id=3> (enter as Guest = „Vendég” user)

Szabolcs-Szatmár-Bereg County Directorate for Disaster Management

<https://szabolcs.katasztrofavedelem.hu/25458/hirek/286939/fusterzekelok-europai-napja>

Zala County Directorate for Disaster Management

<https://zala.katasztrofavedelem.hu/25939/hirek/287411/ki-tudna-szabadulni-egy-ego-lakasbol-tesztelje>

Radio interviews:

At least three County Directorates for Disaster Management (Jász-Nagykun-Szolnok, Szabolcs-Szatmár-Bereg, Tolna) included the importance of smoke alarm devices on radio interviews.

We spoke about the importance of smoke alarm devices in several radio interviews and also recommended the website ‘SmokeAlarmsSavesLives.eu’.

Sharing alarm devices

At least three County Directorates for Disaster Management (Komárom-Esztergom, Tolna, Zala) organized games to win smoke alarm devices through radio broadcasters and/or TV channels.

Appearance in public places and events like:

- Christmas markets (Heves, Tolna)
- public squares and markets (Somogy),
- retirement clubs (Csongrád-Csanád),
- schools (Csongrád-Csanád, Somogy, Tolna),

On Christmas markets we provided information to the public on the following topics, from which one was the importance of use of smoke alarm devices:

1. Promotion and live demonstration of the operation of smoke and carbon-monoxide detectors
2. Prevention of residential fires
3. Presentation of Christmas tree fires through short films our in a container, where we ignited a room with a Christmas tree, where the fire was put out by firefighters.
4. Online fire safety test to the public
5. Advice regarding fire prevention during Advent.

Recommendations:

Three County Directorates for Disaster Management (Békés, Csongrád-Csanád, Fejér) suggested to use QR codes to spread the above referred information easier and faster.

Further expected actions:

We will develop the webpage of National Fire Prevention Commission and we would like to include reference to the Hungarian version of the webpage and the leaflet.

On further training of our professional disaster management staff we will call the attention of our colleagues do not forget to use and refer the Hungarian version of the webpage and the leaflet.

We will try to find supporters, who may donate smoke alarm devices to people in need or to disaster management (which we can share also to people in need).

Appendix 2 – Latvian Report

Information campaign in Latvia "Home safety is in your hands!"

Statistics compiled by the SFRS shows, that in 2024 only 30% of the dwellings in Latvia where a fire broke out, had a smoke detector, making it possible to spot a fire and escape early. This means that although smoke detectors have been required in dwellings for more than five years in Latvia, there are still many dwellings where this legislation has not been complied with.

To improve the situation, the State Fire and Rescue Service of Latvia (SFRS) launched the information campaign "Home Safety is in Your Hands" on 22 November, which marks Smoke Detector Day across Europe.

The campaign continues the activities already started in 2023 to donate and, if possible, immediately install smoke detectors in homes where a small fire has broken out and the smoke detector is not working. In addition, firefighters remind residents of the importance of smoke detectors, the principles of their operation and the need for regular working tests. During the campaign, firefighters donated smoke detectors to more than 500 homes and the same number of smoke detectors are planned for this campaign, thus improving fire safety and potentially saving lives.

The 2024/2025 campaign is about smoke detectors being life-saving devices. So we remind you that safety is not about how quickly the fire brigade arrives or how quickly the fire is put out. Safety is everyone's own responsibility and choice.

Campaign objective

The aim of the smoke detector campaign is to inform people about the importance of smoke detectors and their correct use and maintenance. In homes where a smoke detector will be installed, it will be discussed when it was last tested for serviceability and offered to be tested together to ensure that it is in working order; If not and it is possible, a smoke detector will be installed by firefighters.

Time and place of the campaign

From 22 November 2024 - European Smoke Detector Day, continuing until all smoke detectors will be distributed nationwide.

Campaign activities

- During the end of the year 2024, the SFRS increased the inclusion of educational and reminder information about smoke detectors, communicating with media representatives (press releases, interviews, comments) and posting information on social networks (posts, video stories, other activities with # [#smokealarmssavelives](#));

<https://www.vugd.gov.lv/lv/jaunums/tikai-katra-tresaja-majokli-uzstadits-dumu-detektors>

<https://jauns.lv/raksts/maja-un-darzs/630388-satraucosa-statistika-tikai-katra-tresaja-majokli-uzstadits-dumu-detektors>

<https://www.facebook.com/reel/575647541513005>

<https://www.facebook.com/reel/1259799375058708>

<https://www.facebook.com/photo/?fbid=982055653966853&set=a.554407673398322>

- preparing and sending out a press release on the campaign activities on 22 November, 2024;
- Information for municipalities to place in their monthly publications for citizens on smoke detectors - installation and maintenance;
- organized a competition on SFRS social networks, inviting people to answer the prepared questions on smoke detectors in the comments and three of the correct answers will be entered into a prize draw to win a smoke detector (on each social network platform - instagram and facebook, six smoke detectors in total).

<https://www.instagram.com/p/DC8izbMtXgk/>

- From 22 November, on calls to the residential sector where the burn is small (up to 10m2), the firefighters will check whether there is a smoke detector in the dwelling; if not and it is possible, a smoke detector will be installed or donated.
- The media were offered a variety of submitted stories + information about smoke detectors in dwellings.

The EU Smoke Alarm website materials were not used in the campaign as we continued the campaign already launched in 2023 with a new focus on persons individual responsibility for their own safety

Appendix 3 – Feedback from the smoke alarm companies

Sanne Michielsen from Smartwares

Smartwares is happy to be a part of building more awareness in European countries and we are happy to see enthusiasm and drive with the fire fighters that are supporting and carrying out our important message. We see an increase in consumer willingness to purchase and install the life saving devices we offer but we are not active enough in the focus countries for the campaign to actively measure the results. We look forward to seeing the campaign evolve even further in the next years!

Shane Lyons from EI Electronics

Ei Electronics, as a European manufacturer, is proud to support and be actively involved in the EU Smoke Alarm Day.

Consumers across the member states need to be protected and it is up to the individual country governments to ensure there is robust legislation to ensure these life saving devices are in every citizen's home. We congratulate Poland on making this significant advance in 2024 and compliment the Polish Fire Services on their enthusiastic roll out of fire safety checks.

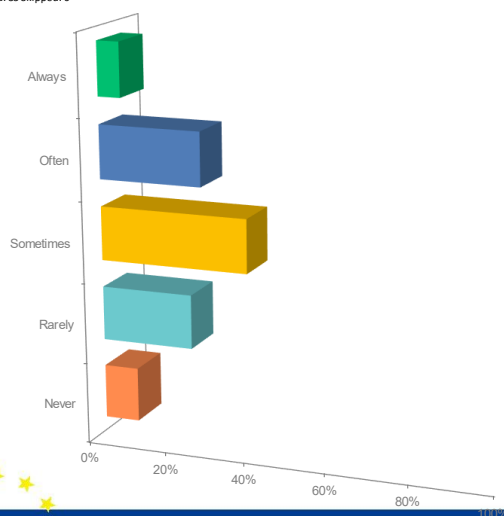

Appendix 4 – Smoke Alarm Survey

Shane Lyons, a member of our Working Group, from EI Electronics developed a short online survey using Google Forms to collect the responses of fire service personnel on their experiences of the prevalence of smoke alarms in residential properties that were involved in fire incidents. This was circulated to fire services in Europe through the FEU. Responses were received from 15 countries.

The responses to the questions are outlined below:

Q1: How often do you encounter working fire alarms during house fire incidents?

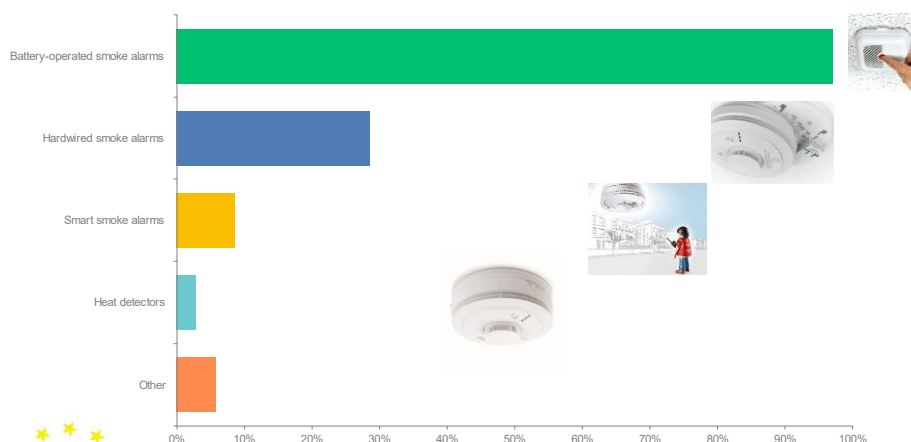

Answered: 35 Skipped: 0

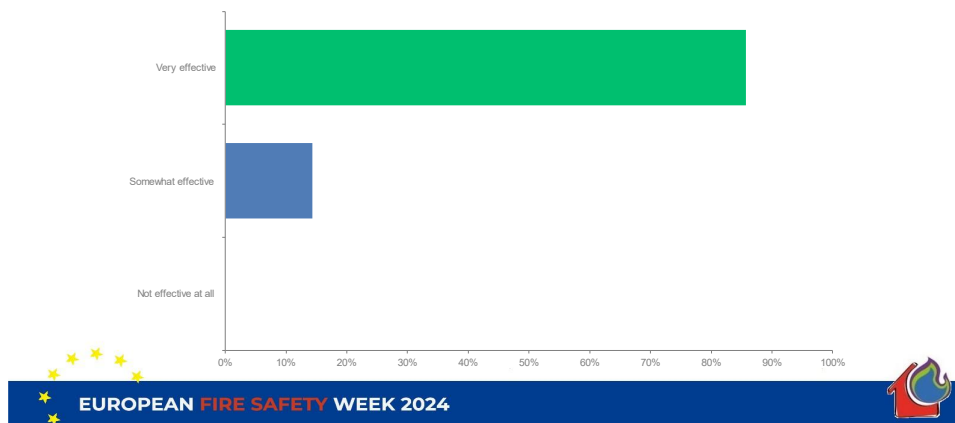

ANSWER CHOICES	RESPONSES
Always	5.71%
Often	25.71%
Sometimes	37.14%
Rarely	22.86%
Never	8.57%

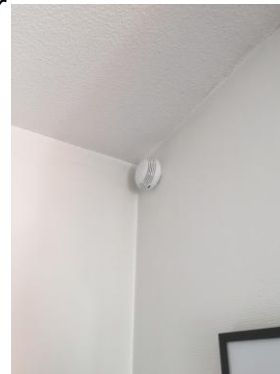

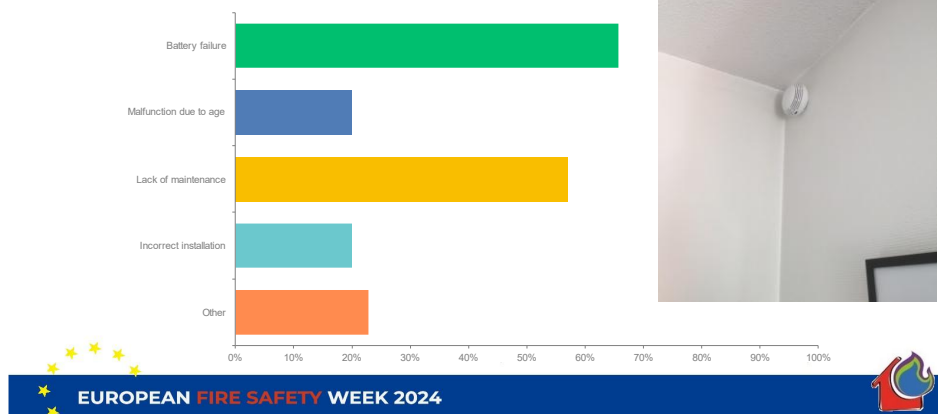

Q2: What types of fire alarms are most commonly found during house fires? Select all that apply.

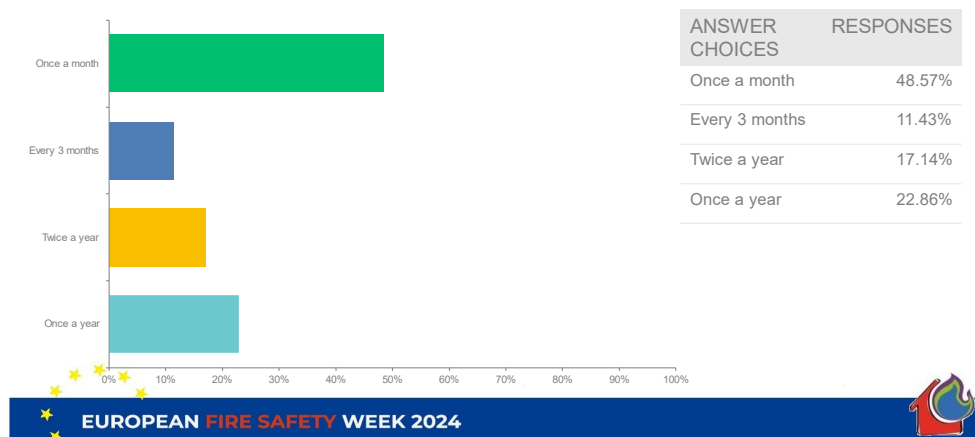

Q3: In your experience, how effective are working fire alarms in alerting occupants on time?

Q5: What are the common reasons for fire alarms failing during house fires?

Q6: How often do you think fire alarms should be tested by homeowners?

Q8: How likely is it that you would recommend
Specify company, brand, product or service to a
friend or colleague?

18% of Fire officers have
a brand or product that
they would recommend.

Appendix 5 – Social Media Campaign 2024

The following 25 social media posts were developed for the 2024 campaign. They were circulated in English. They ran from 1st November to 3rd January 2025.

Summary of Social Media Campaign Posts 2024

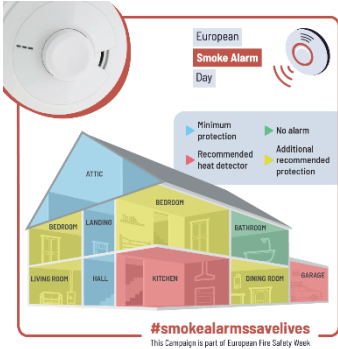

Date	Post	Visual

Appendix 7 – Review of 2024 Social Media Campaign performance

7.1. Campaign Performance Overview

The campaign ran from **November 1, 2024, to January 3, 2025**, with a primary focus on increasing awareness about smoke alarms and fire safety.

Key performance indicators (KPIs) included **follower growth, impressions, engagement, and post interactions**.

7.1.1 Audience Growth

- The campaign saw **significant growth** in followers:
 - **X:** +6600% (67 new followers)
 - **Facebook:** +28.57% (18 new followers)
 - **Instagram:** +16.67% (21 new followers)
 - **LinkedIn:** +36.49% (101 new followers)
 - **Overall campaign hashtag presence:** +93.46% increase
- ◆ *Strength:* The campaign successfully expanded its audience base across multiple platforms. X saw the most dramatic growth, likely due to effective hashtag use or viral content.
- ◆ *Weakness:* Despite growth, the absolute follower numbers remain **low**. While X showed a massive **percentage** increase, it started from a small base. More outreach might be needed to build a sustained following.

7.2. Content Reach and Engagement

7.2.1 Impressions (Reach)

- **Total Impressions:**
 - **16.51K** overall (+12504.58%)
 - **Facebook:** 6,012 (+4709.6%)
 - **Instagram:** 296 (+4833.33%)
 - **LinkedIn:** 10.2K (most significant platform for visibility)
- ◆ *Strength:* The campaign's visibility grew exponentially, with a **large reach on LinkedIn**. This suggests that professionals and policymakers engaged with the content.

♦ *Weakness:* Despite high impressions, conversions (clicks, comments, shares) did not always match. **Engagement ratios need improvement** to ensure impressions turn into action.

7.2.2 Engagement (Likes, Shares, Comments, Clicks)

- **Total Post Interactions:** 1,236 (across all platforms)
 - **LinkedIn had the highest engagement:** 806 interactions.
 - **Best-performing post:** "Do you know your country's smoke alarm rules?" (4,134 impressions, 211 interactions).
 - **Other top posts:** Messages from FEU President Stephan Wevers and MEP Maria Walsh saw moderate engagement.
- ♦ *Strength:* Posts with **direct questions, real-life stories, and statistics performed well**. The campaign leveraged storytelling effectively, especially with posts like **"This little hero saved three lives!"** and **"This smoke detector saved four lives!"**.
- ♦ *Weakness:* Twitter and Instagram had **lower engagement rates** despite high impressions. This suggests that the **content wasn't as compelling for engagement** (likes, shares, or comments) on those platforms. Visual or interactive content could improve performance.

7.3. Content Strategy Analysis

The campaign posted **100 posts across all platforms**, evenly distributed:

- **LinkedIn, X, Facebook, Instagram:** 25 posts each.
- **Frequent content themes:** Fire safety tips, real-life success stories, expert messages, webinars.
-

Best-Performing Content Types:

- **Educational posts & FAQs:** "Do you know your country's smoke alarm rules?" was the most successful.
- **Survivor stories:** "This little hero saved three lives" resonated well.
- **Government official messages:** Messages from European policymakers added credibility.
- **Fire Safety Events / Webinars:** Moderate engagement.

- ◆ **Strength:** The campaign **effectively diversified content**, balancing **educational, emotional, and expert-driven** narratives.
- ◆ **Weakness:** Some **expert videos and long text posts** had **low engagement**, indicating a need for **more visually engaging formats** (shorter clips, infographics, interactive quizzes).

7.4. Platform-Specific Performance

1. **LinkedIn** – *Best performer (10.2K impressions, 806 interactions)*
 - ✓ Great for professional engagement and policy-related discussions.
 - ✗ Needs **more shares and comments** rather than just likes.
2. **X** – *Massive growth but low engagement*
 - ✓ Increased visibility (+6600% followers).
 - ✗ **Low interaction per tweet**, indicating a need for more engaging formats (polls, videos, threads).
3. **Facebook** – *Moderate performance*
 - ✓ Some posts had **high shares** (e.g., "Smoke alarms save lives!").
 - ✗ **Low comment engagement**, suggesting content wasn't sparking enough discussion.
4. **Instagram** – *Weakest platform (lowest engagement per post)*
 - ✓ Good growth in followers (+16.67%).
 - ✗ **Reels and posts saw minimal engagement**. A **more visually dynamic approach** is needed.

7.5. Overall Success and Areas for Improvement

✓ Campaign Successes

- **Excellent reach growth** (particularly on LinkedIn and Twitter).
- **Engaging content formats** (real-life stories, expert opinions).
- **Strong hashtag strategy** (#FireSafety, #SmokeAlarmsSaveLives).
- **LinkedIn became a valuable platform** for engaging professionals.

✗ Challenges & Recommendations

- **Low conversion from impressions to interactions** → **Encourage audience participation** through polls, contests, or user-generated content.
- **Weak Instagram & Twitter engagement** → **Use more videos, reels, and infographics**.

- **Some posts lacked virality** → Experiment with trending topics and influencer collaborations.
- **Need for sustained growth** → Continue content beyond campaign dates to maintain momentum.

Overall Conclusion:

The 2024 campaign was more successful in raising awareness compared to the 2023 campaign but less effective in deep engagement and conversions. There are still areas for improvement.

Our future campaigns should focus more on interactive content, stronger calls to action and sustained posting schedules to maximise impact.
